Anyone who has already installed the latest version of Windows? Maybe a bug in the new version? Im trying to recover all the passwords for the windows server. A: I'm not sure if this works, but you can try the following command: (From cmd) net user /password * This will print all the usernames, encrypted passwords, and the hashes (hash and salt) they have for the user passwords. Cardiac resynchronization therapy in patients with preserved left ventricular systolic function: a systematic review and meta-analysis of randomized controlled trials. Cardiac resynchronization therapy (CRT) is an established therapy in heart failure patients with severely reduced left ventricular (LV) systolic function. Data on its efficacy in patients with preserved LV systolic function are limited. Therefore, we performed a systematic review and meta-analysis of all randomized controlled trials (RCTs) assessing the effects of CRT in patients with LV ejection fraction (LVEF) >50% and New York Heart Association (NYHA) class I-III heart failure. PubMed and EMBASE databases were searched to identify relevant publications. RCTs were included in a systematic review and meta-analysis if they were published as full text in English or German and included at least 10 patients with LVEF ≥50%. Data from the individual RCTs were pooled and analyzed using RevMan 5.0. Fifteen publications including 524 patients with CRT and 514 controls were included in the analysis. The pooled data showed a significant reduction in the risk of cardiovascular (CV) death (RR 0.40, 95% CI 0.19-0.83; p = 0.02) and heart failure hospitalization (RR 0.40, 95% CI 0.21-0.76; p = 0.004). The effect of CRT on the risk of new onset atrial fibrillation was not significant (RR 0.55, 95% CI 0.22-1.36; p = 0.19). CRT was associated with a significant reduction in the risk of new onset atrial fibrillation (RR 0.17, 95% CI 0.04-0.72; p = 0.01) and a significant increase in the NYHA class (MD 0.67, 95% CI 0.05-1.30; p = 0.04). No significant reduction in the 82157476af
